

Log-guided parameterization in full waveform inversion: tuning a two-parameter case

Ninoska Amundaray*, Scott Keating, Matthew Eaid and Kris Innanen

*ninoska.amundaraynie@ucalgary.ca

Summary

1.A) Eaid et al. (2021) proposed incorporating observations about strong parameter correlation from well-logs into FWI formulation using a single parameter.

1.B) We suggest incorporating a second parameter to the same formulation to include information omitted by (1A).

1.C) In applications like CO₂ sequestration, gas effects will **divert elastic parameters from an existing background trend** (see FIG. 3 and FIG. 4).

1.D) We are testing (1B) using proposed models for the Carbon Management Canada Newell County Facility after 1664 tons of CO₂ are injected in the reservoir (Macquet et al., 2019).

Method

- Fit a trendline to the well-log data.
- Parameterize (2A) in the **tangent direction** (Eaid et al., 2021).
- Define a vicinity of interest along (2A).
- Project values inside (2C) into a **normal plane**
- Apply principal component analysis using (2D).

Now, the used model in full waveform inversion is:

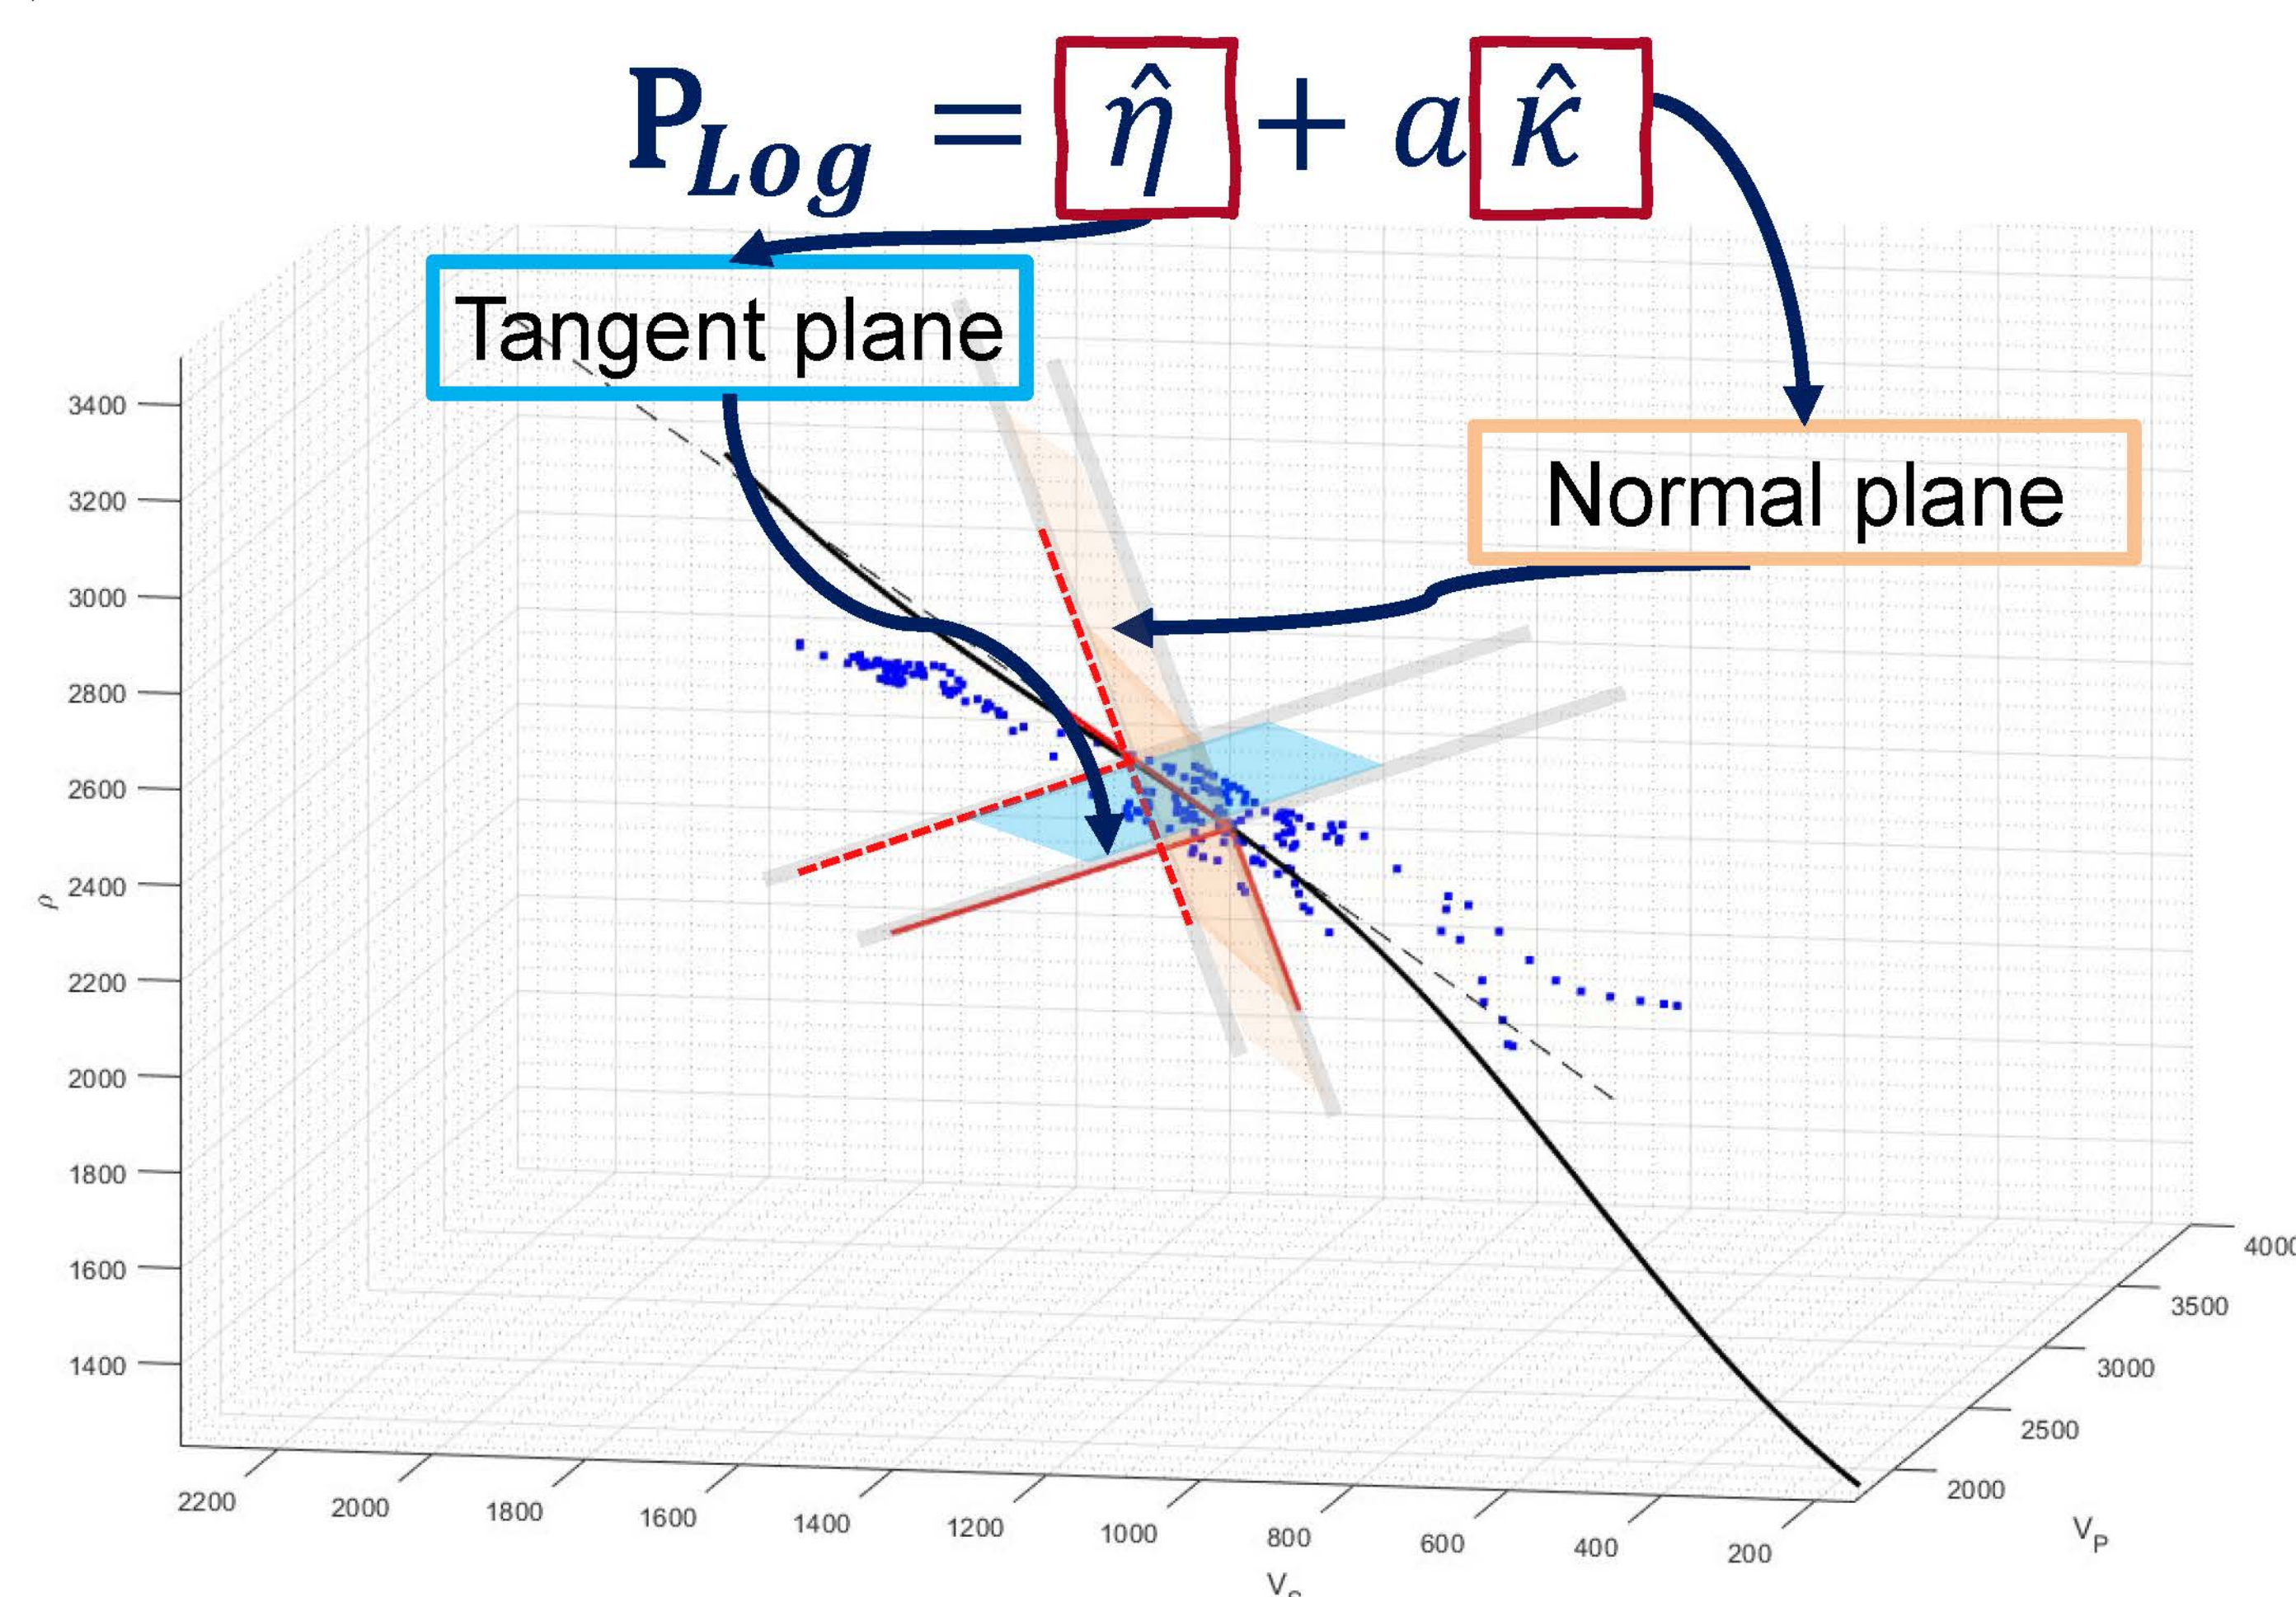

FIG 1. Graphical representation of the proposed parameterization using well-log information in V_p - V_s - ρ space.

Results in a time-lapse application

FIG 2. True model residuals from an advanced stage of CO₂ injection.

TEST 1

Using a small deviation from the trendline to estimate $\hat{\kappa}$

FIG 3. Example of the region considered along the trendline in test 1.

FIG 5. Inverted residuals from test 1 at an advanced stage of CO₂ injection.

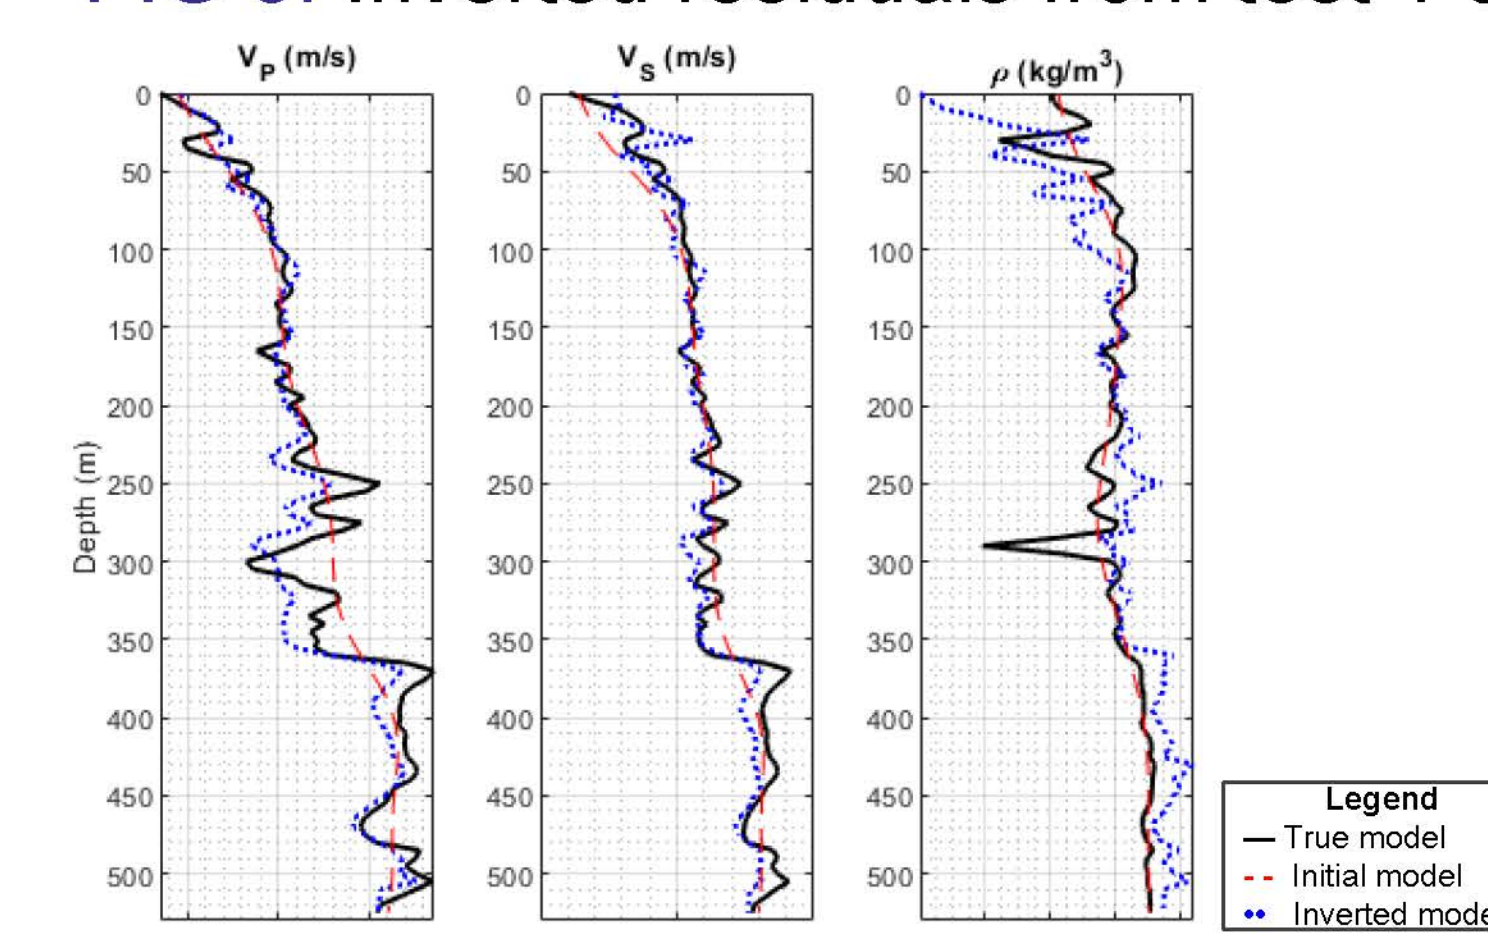

FIG 6. Model comparison for an advanced stage of CO₂ injection at offset 1 (see FIG 2).

Measured V_p reduction
[-3, - 394] m/s
(reservoir)

TEST 2

Using a large deviation from the trendline to estimate $\hat{\kappa}$

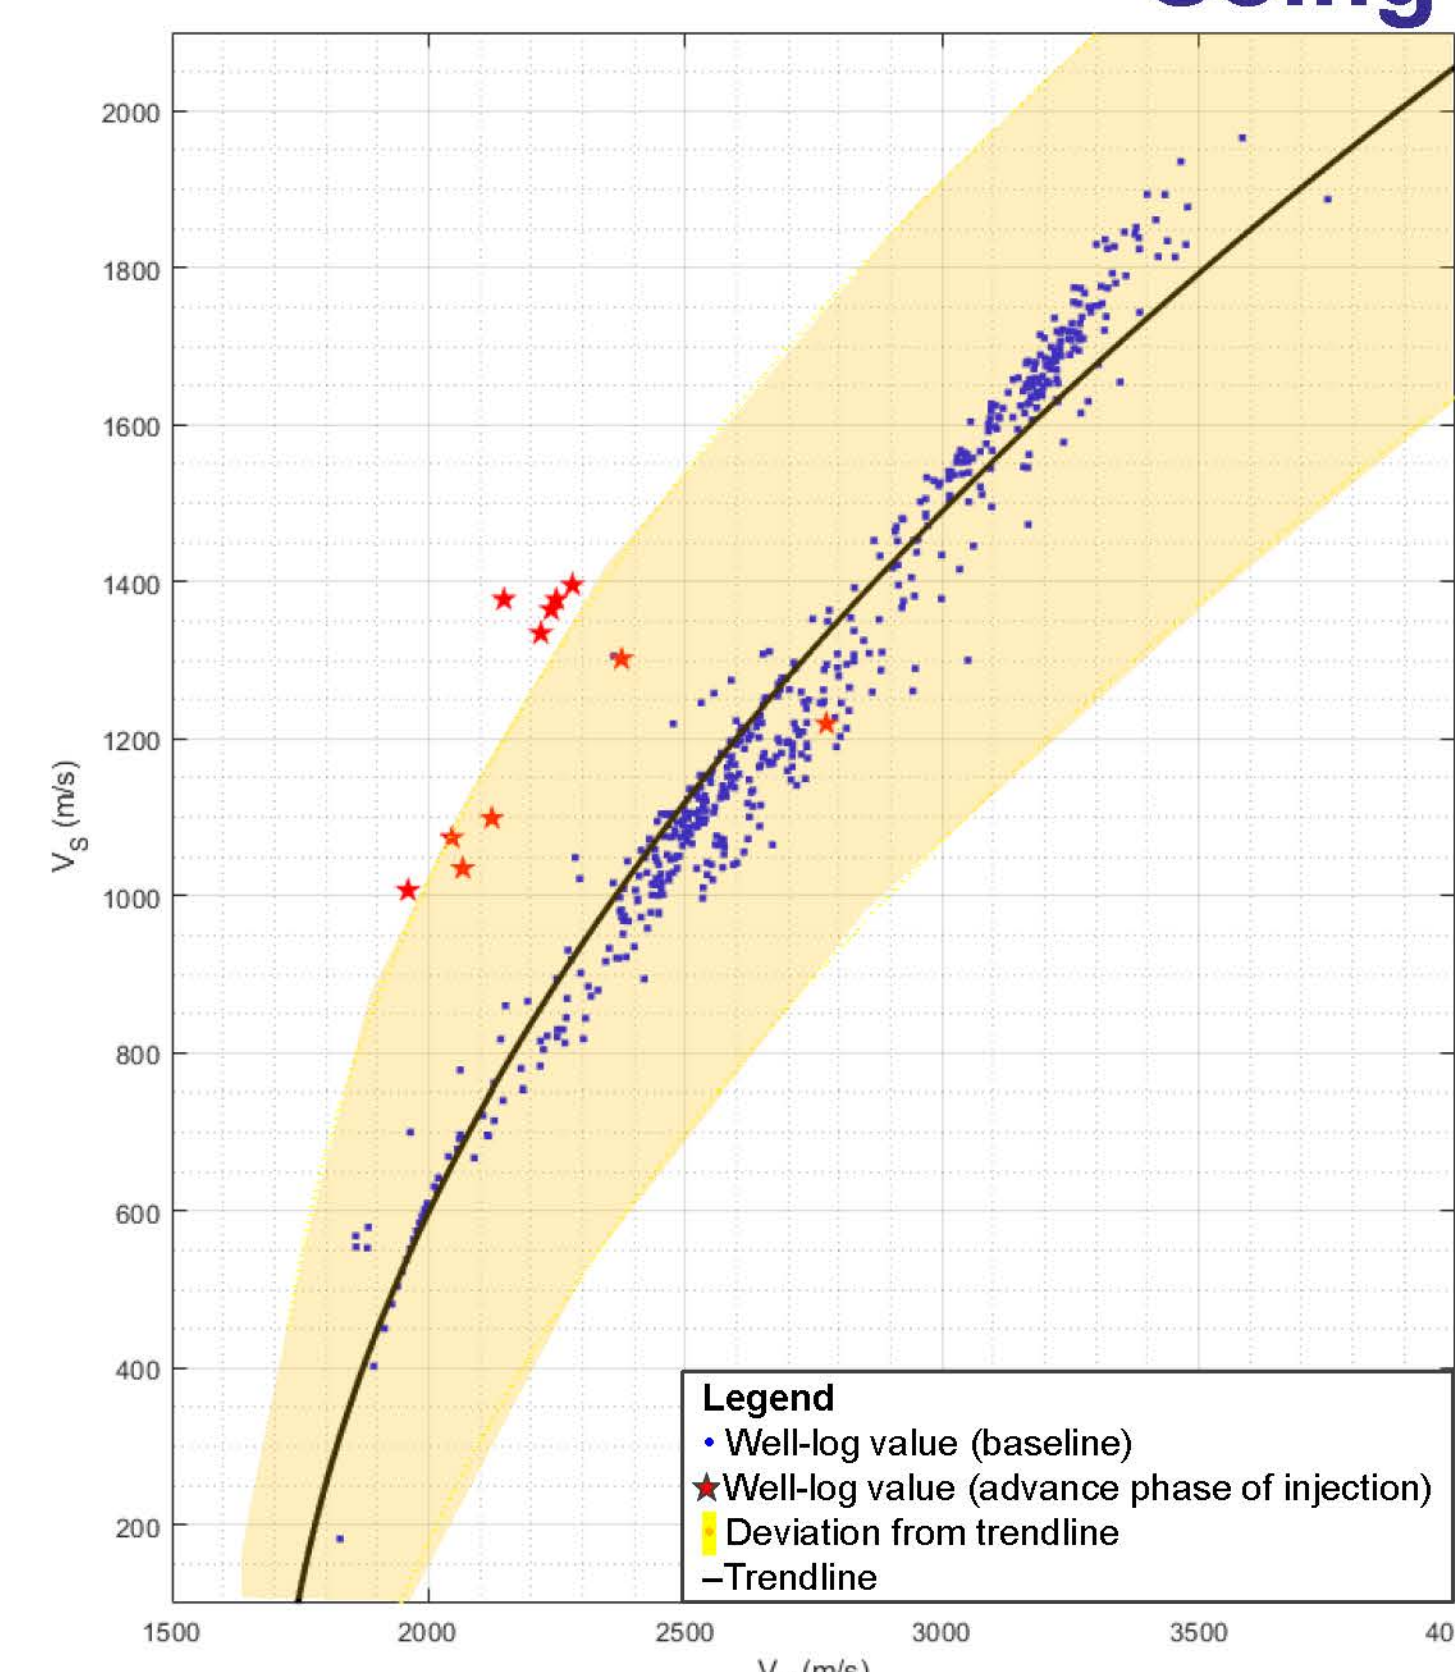

FIG 4. Example of the region considered along the trendline in test 2.

FIG 7. Inverted residuals from test 2 at an advanced stage of CO₂ injection.

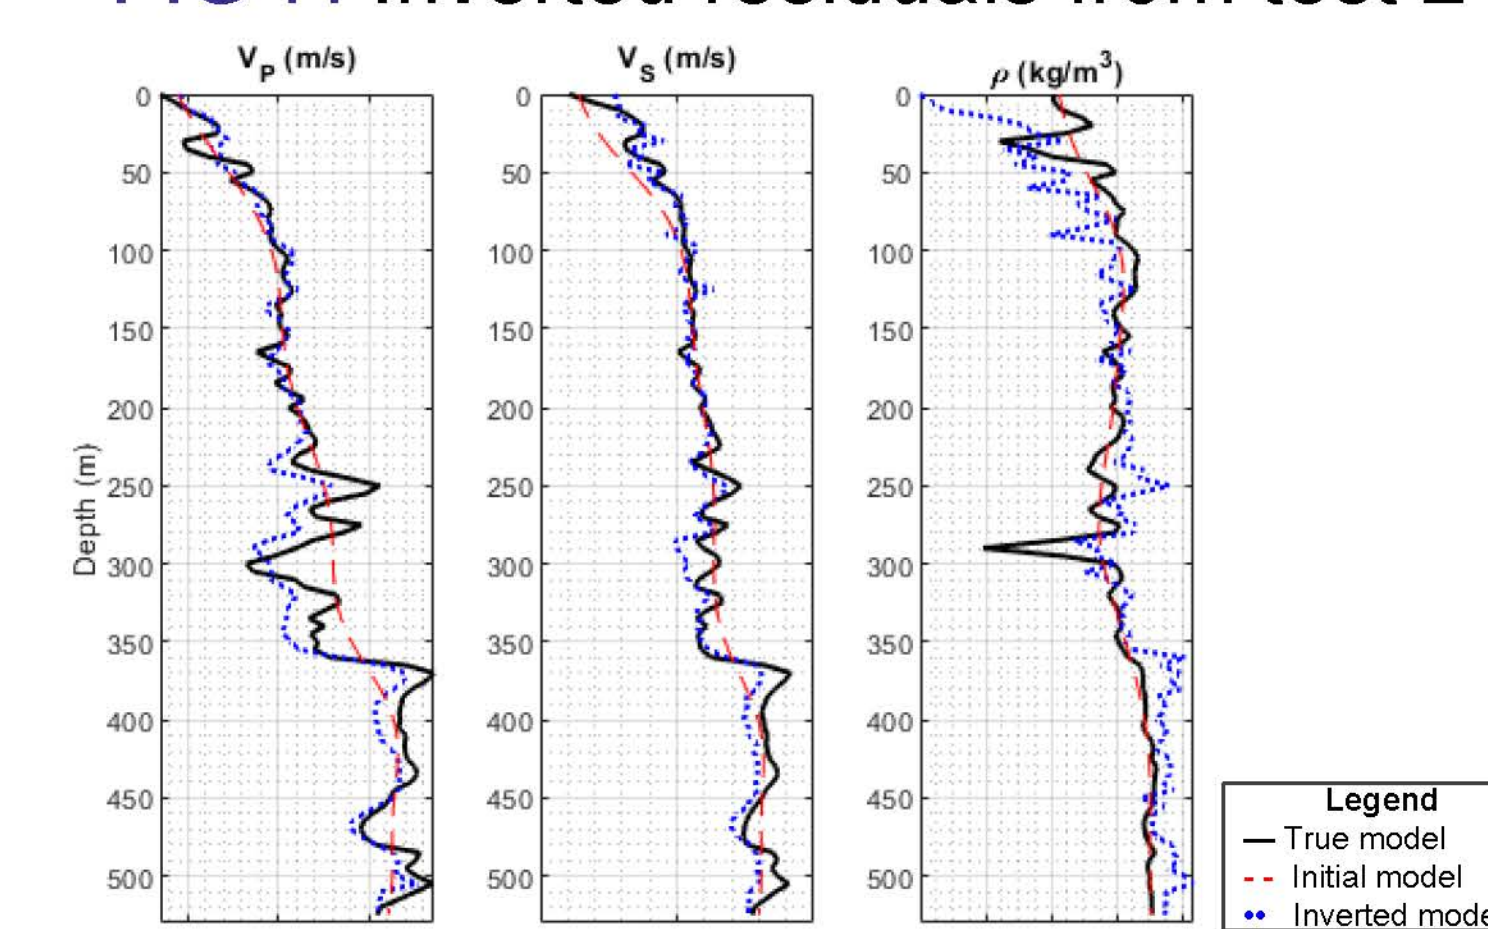

FIG 8. Model comparison for an advanced stage of CO₂ injection at offset 1 (see FIG 2).

Measured V_p reduction
[-1, - 410] m/s
(reservoir)

Acknowledgements

The authors thank the sponsors of CREWES for continued support. This work was funded by CREWES industrial sponsors and NSERC (Natural Science and Engineering Research Council of Canada) through the grant CRDPJ 543578-19. We also acknowledge the Carbon Management Canada Newell County Facility for providing critical information for this investigation. Likewise, we thank Qi Hu for sharing his estimated well-logs for the study site.
