

# Least-squares RTM of a seismic-while-drilling dataset

Nasser Kazemi, Daniel Trad, Kris Innanen, and Roman Shor

CREWES sponsors meeting  
November 30, 2018

# Motivations: Geosteering and Well placement issues

Scenario A

Scenario B

- ❑ Statoil Hydro Troll field: 2.4 b\$ (Based on OTC-17110).
  - ❑ Chevron Alba (John Hampson) 225 M\$ of additional production in 3 wells.
- Reports from [Chemali, 2011](#).

# Sources of uncertainties

Geology

Time to Depth conversion

Sub-seismic events

Depth imaging

- Migration operator falls behind the physics
- Inaccurate velocity
- Acquisition footprint
- Seismic Bandwidth
- Non-uniform illumination

## CT scan

Goldman, 2007

Greenspan, 2008

## Surface seismic

Kazemi Nojadeh, 2017

Kazemi, 2018

## Non-uniform illumination

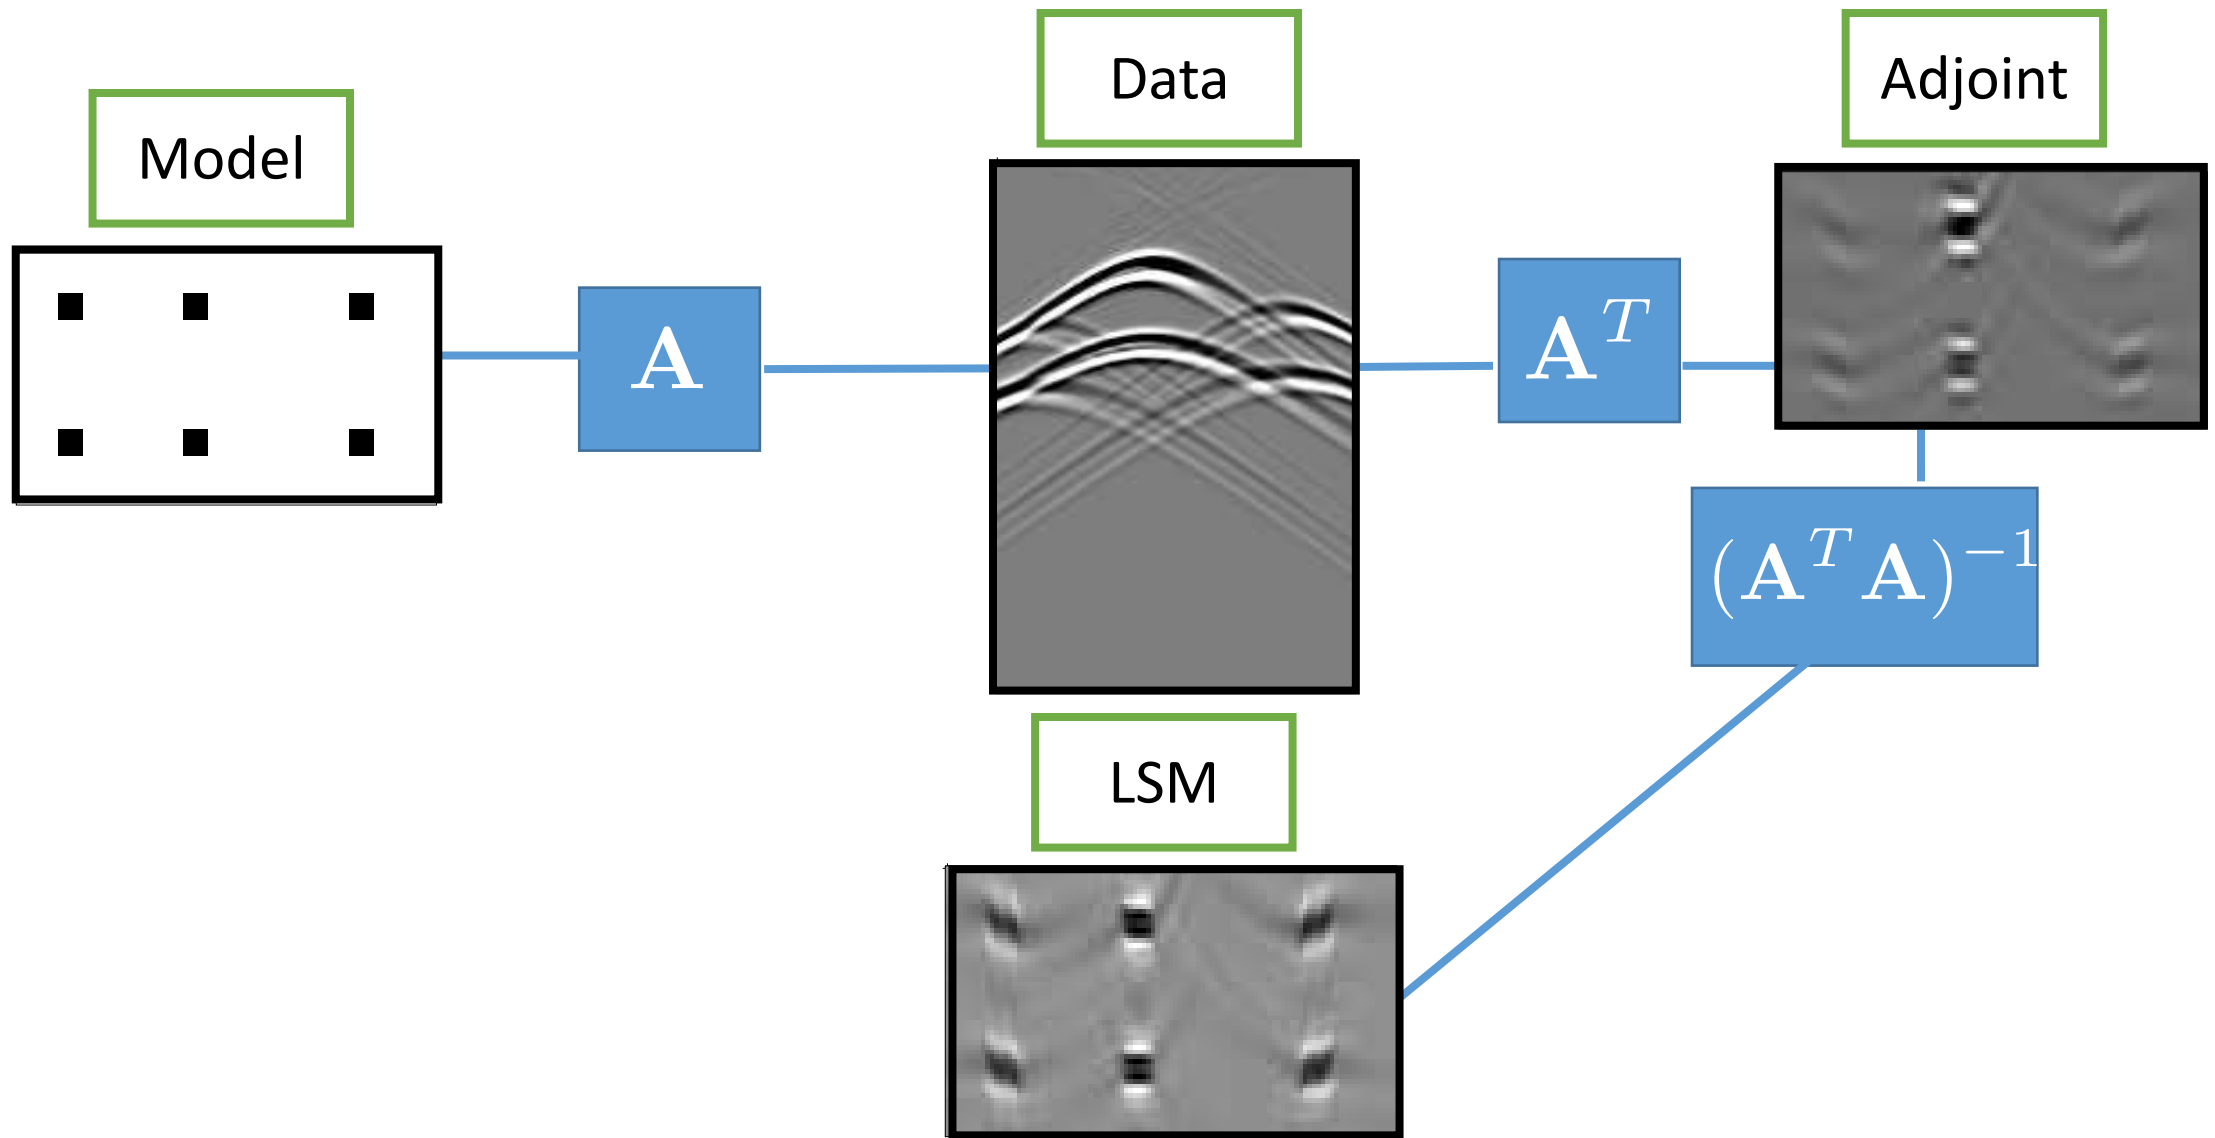

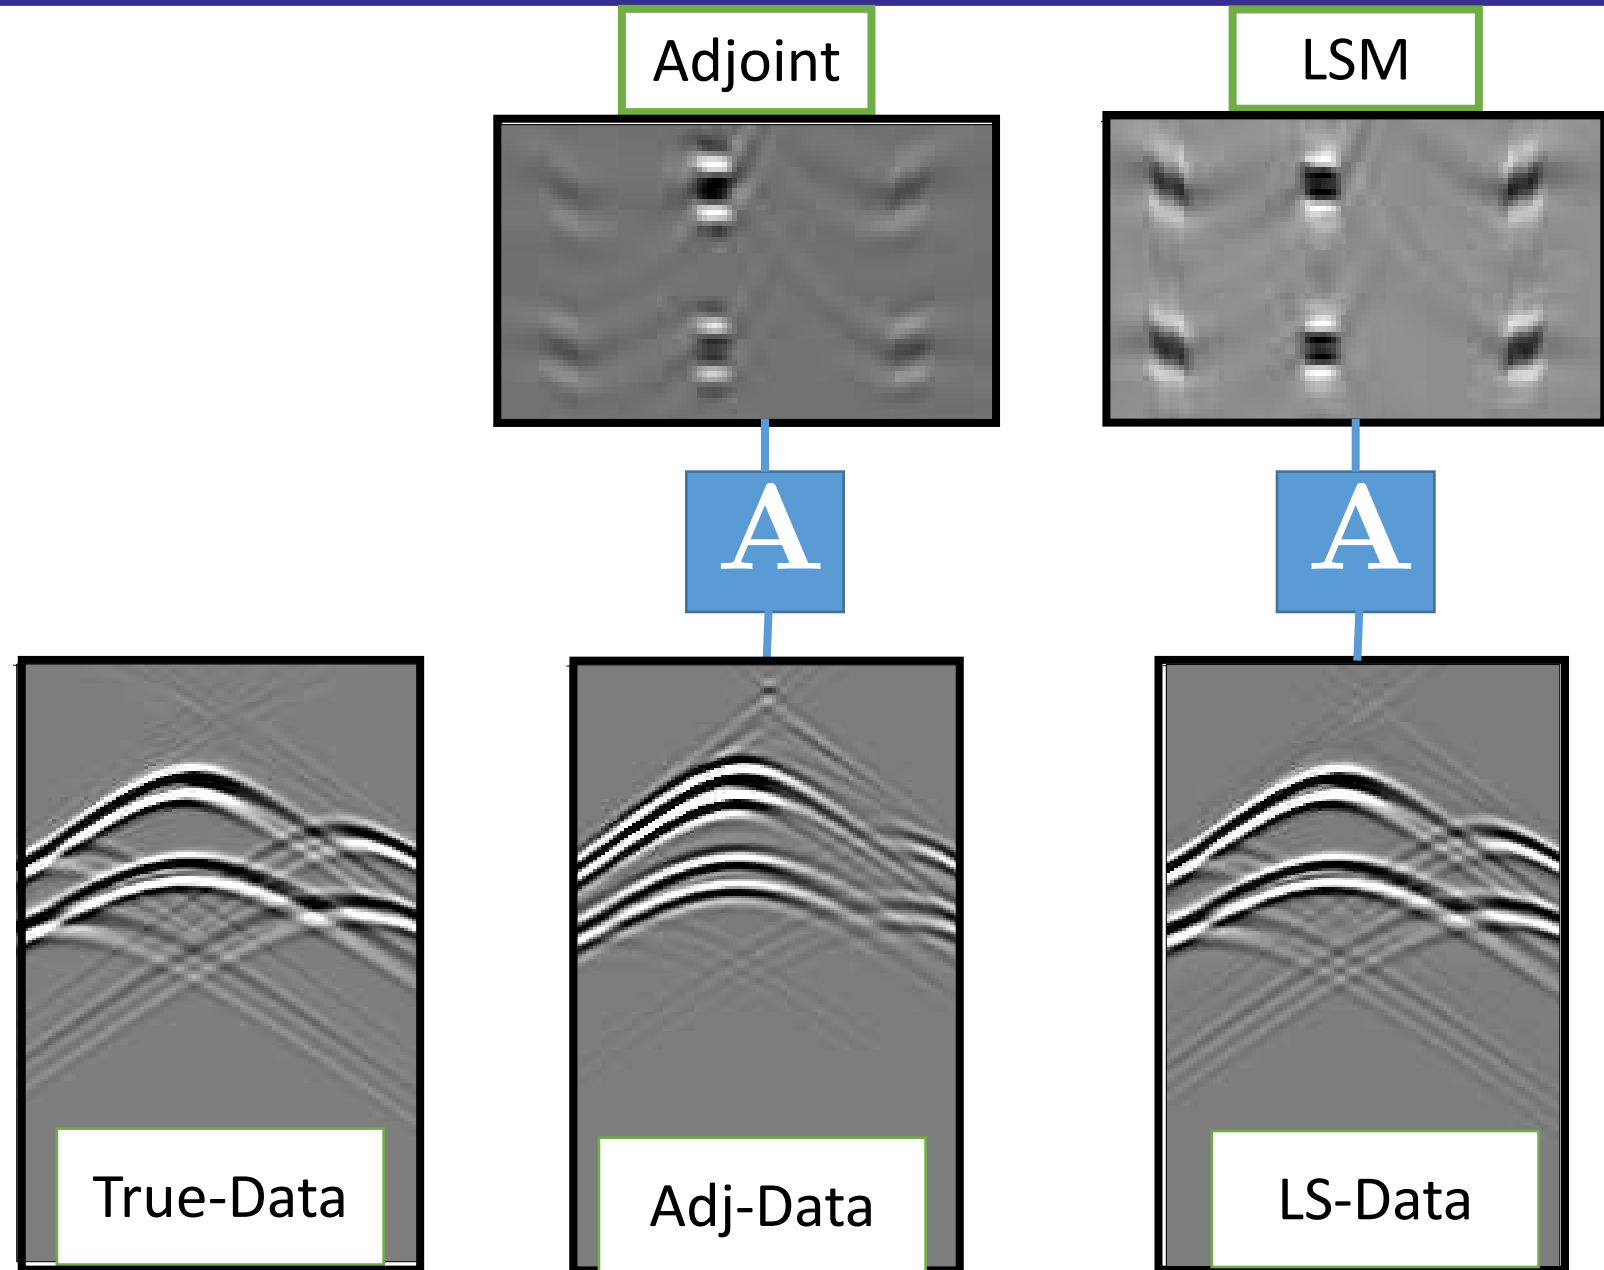

Figure adapted from acceleware. Note: Figure is shown for illustration purposes only.

Adjoint migration of Gulf of Mexico dataset, [Kazemi, 2018](#).

LS migration of Gulf of Mexico dataset, [Kazemi, 2018](#).

Adjoint

Least squares

Adjoint vs. LS migration of Gulf of Mexico dataset, [Kazemi, 2018](#).

## Inversion (LSM):

### Merits:

Balanced amplitudes

Attenuated artifacts

Better resolution

Reduced acquisition footprint

### Demerits:

Computational time

Null space of the operator

## Migration

Kazemi Nojadeh, 2017.

## Proposal:

- Add new sources and receivers with different configurations.
- Seismic-while-drilling acquisition can add new insight about the subsurface.
- Seismic-while-drilling will help to reduce the null space of the migration operator.

# SWD acquisition

P component

Shear component

Poletto and Bellezza, 2006

- Displacement, harmonic waves, boundary conditions: source signature.
- Drill bit source is non-impulsive and correlative.

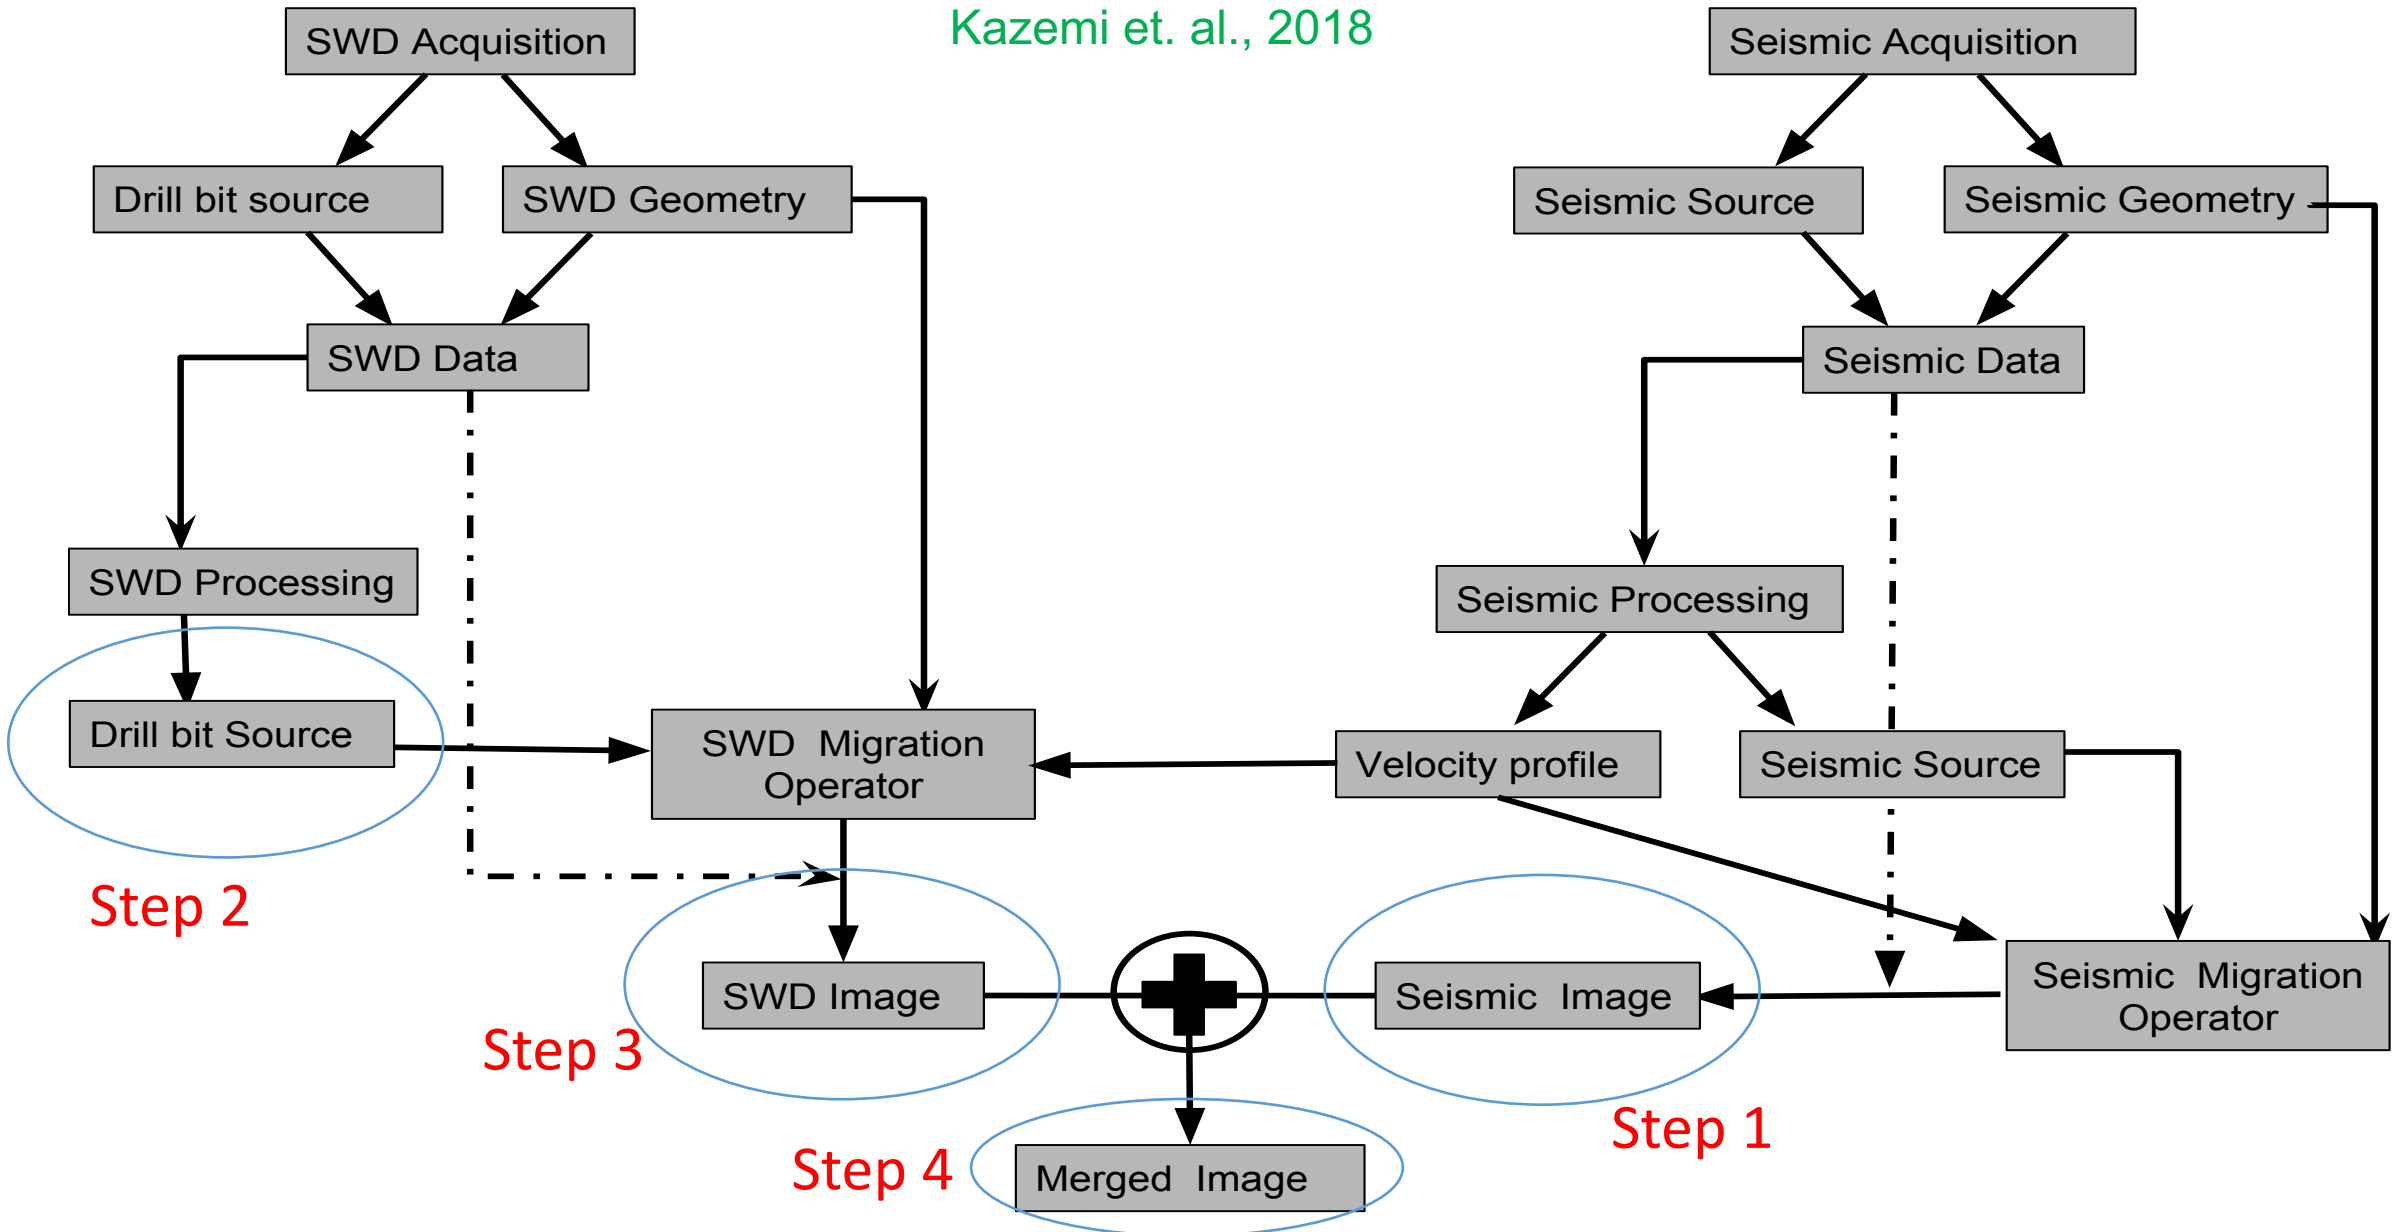

- Geosteering
- Optimized Well placement
- Interactive decision making for drilling
- Reducing the drilling risks
- Reducing uncertainties- improving illumination

# SWD+surface seismic imaging workflow

Kazemi et. al., 2018

## Step2: SWD source signature estimation

- Solve for the reflectivity: SMBD algorithm, [Kazemi and Sacchi, 2014](#).

$$\hat{\mathbf{x}} = \underset{\mathbf{x}}{\operatorname{argmin}} \quad \frac{1}{2} \|\mathbf{A} \mathbf{x}\|_2^2 + \lambda \sum_i (\sqrt{x_i^2 + \epsilon^2} - \epsilon), \quad \text{subject to} \quad \mathbf{x}^T \mathbf{x} = 1$$

- Estimate SWD source signature: least squares estimator

$$\hat{\mathbf{w}}_{SWD} = \underset{\mathbf{w}_{SWD}}{\operatorname{argmin}} \quad \frac{1}{2} \|\mathbf{X} \mathbf{w}_{SWD} - \mathbf{d}\|_2^2$$

## Step2: SWD source signature estimation

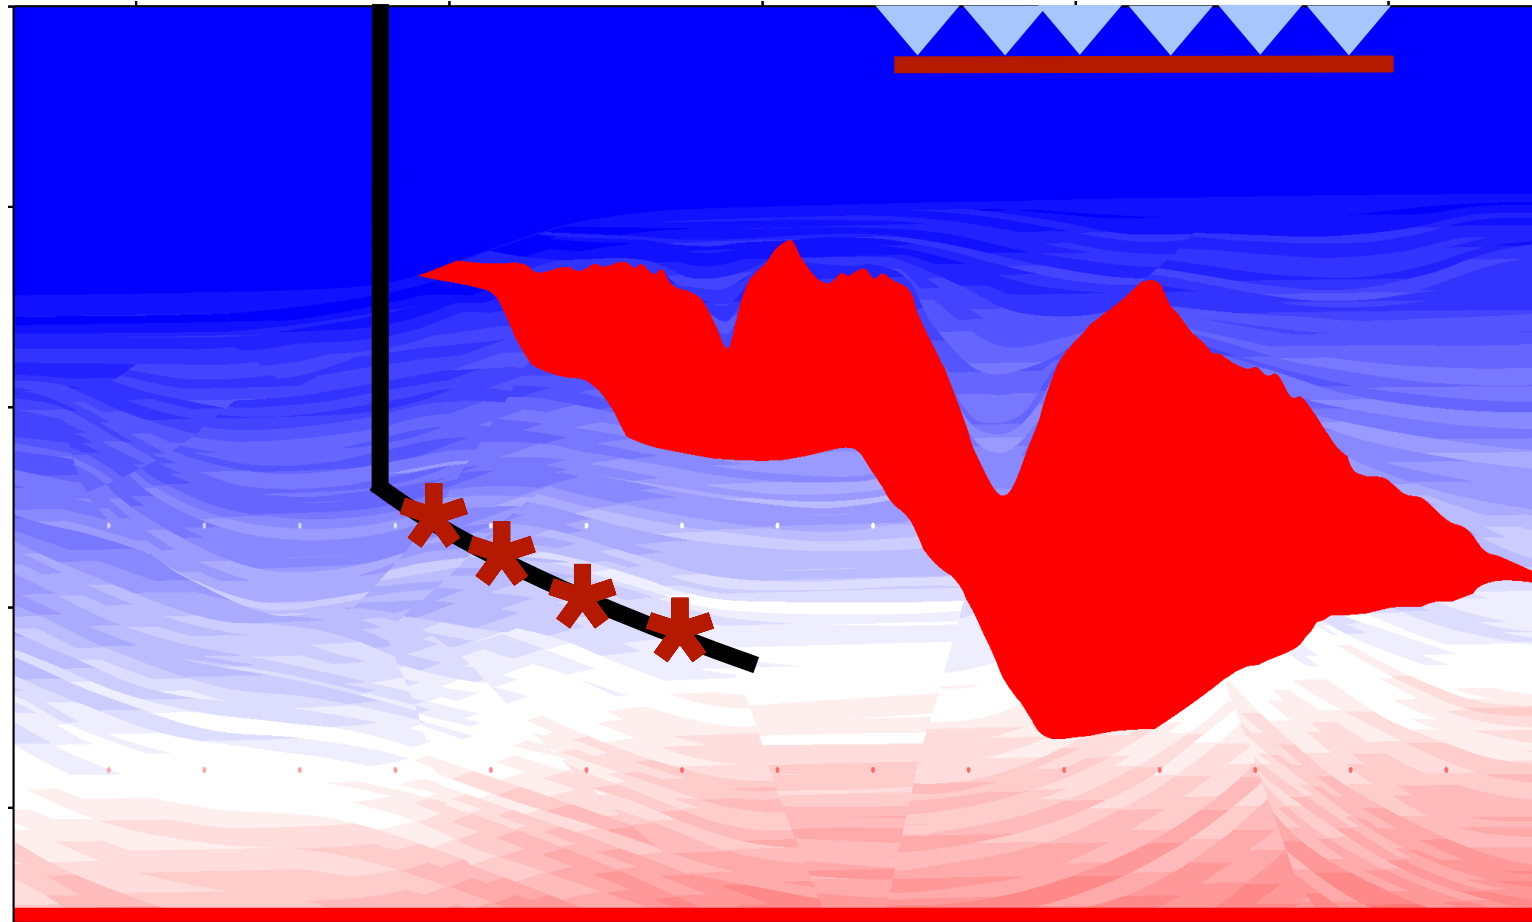

## Step2: SWD source signature estimation

Original      Estimated

## Step 3: SWD image

# Step4: SWD+Surface seismic image

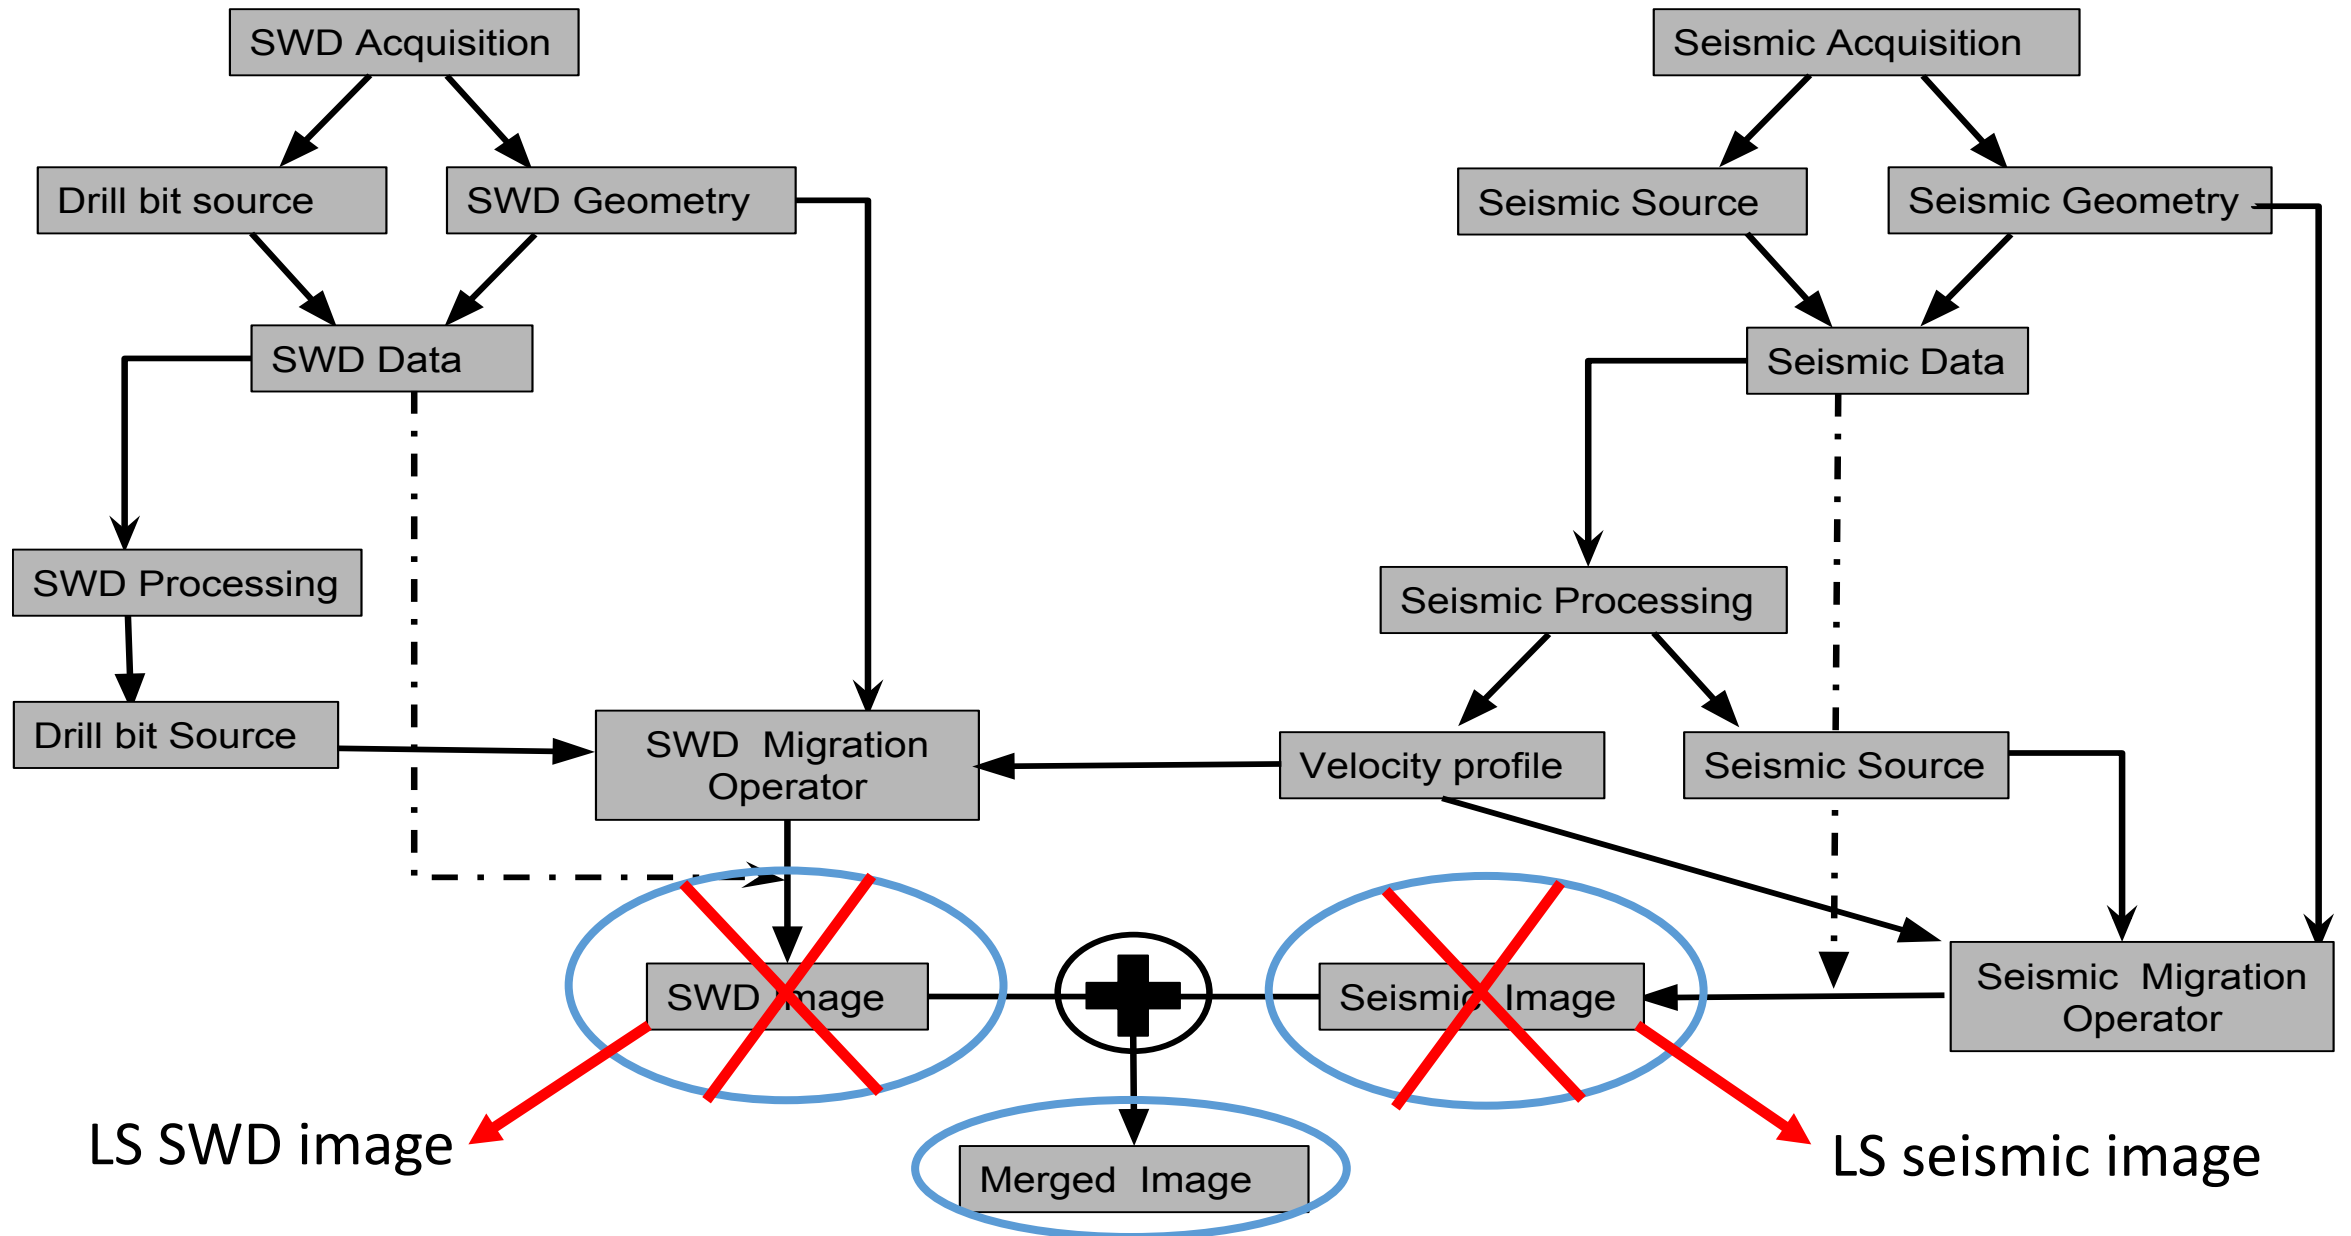

# Surface seismic image

# Best of both worlds

The general least-squares cost function

$$\mathbf{m}_{LS} = \underset{\mathbf{m}}{\operatorname{argmin}} \|\mathbf{L}\mathbf{m} - \mathbf{d}\|_2^2 + \mu\mathcal{R}(\mathbf{m})$$

The one that we use

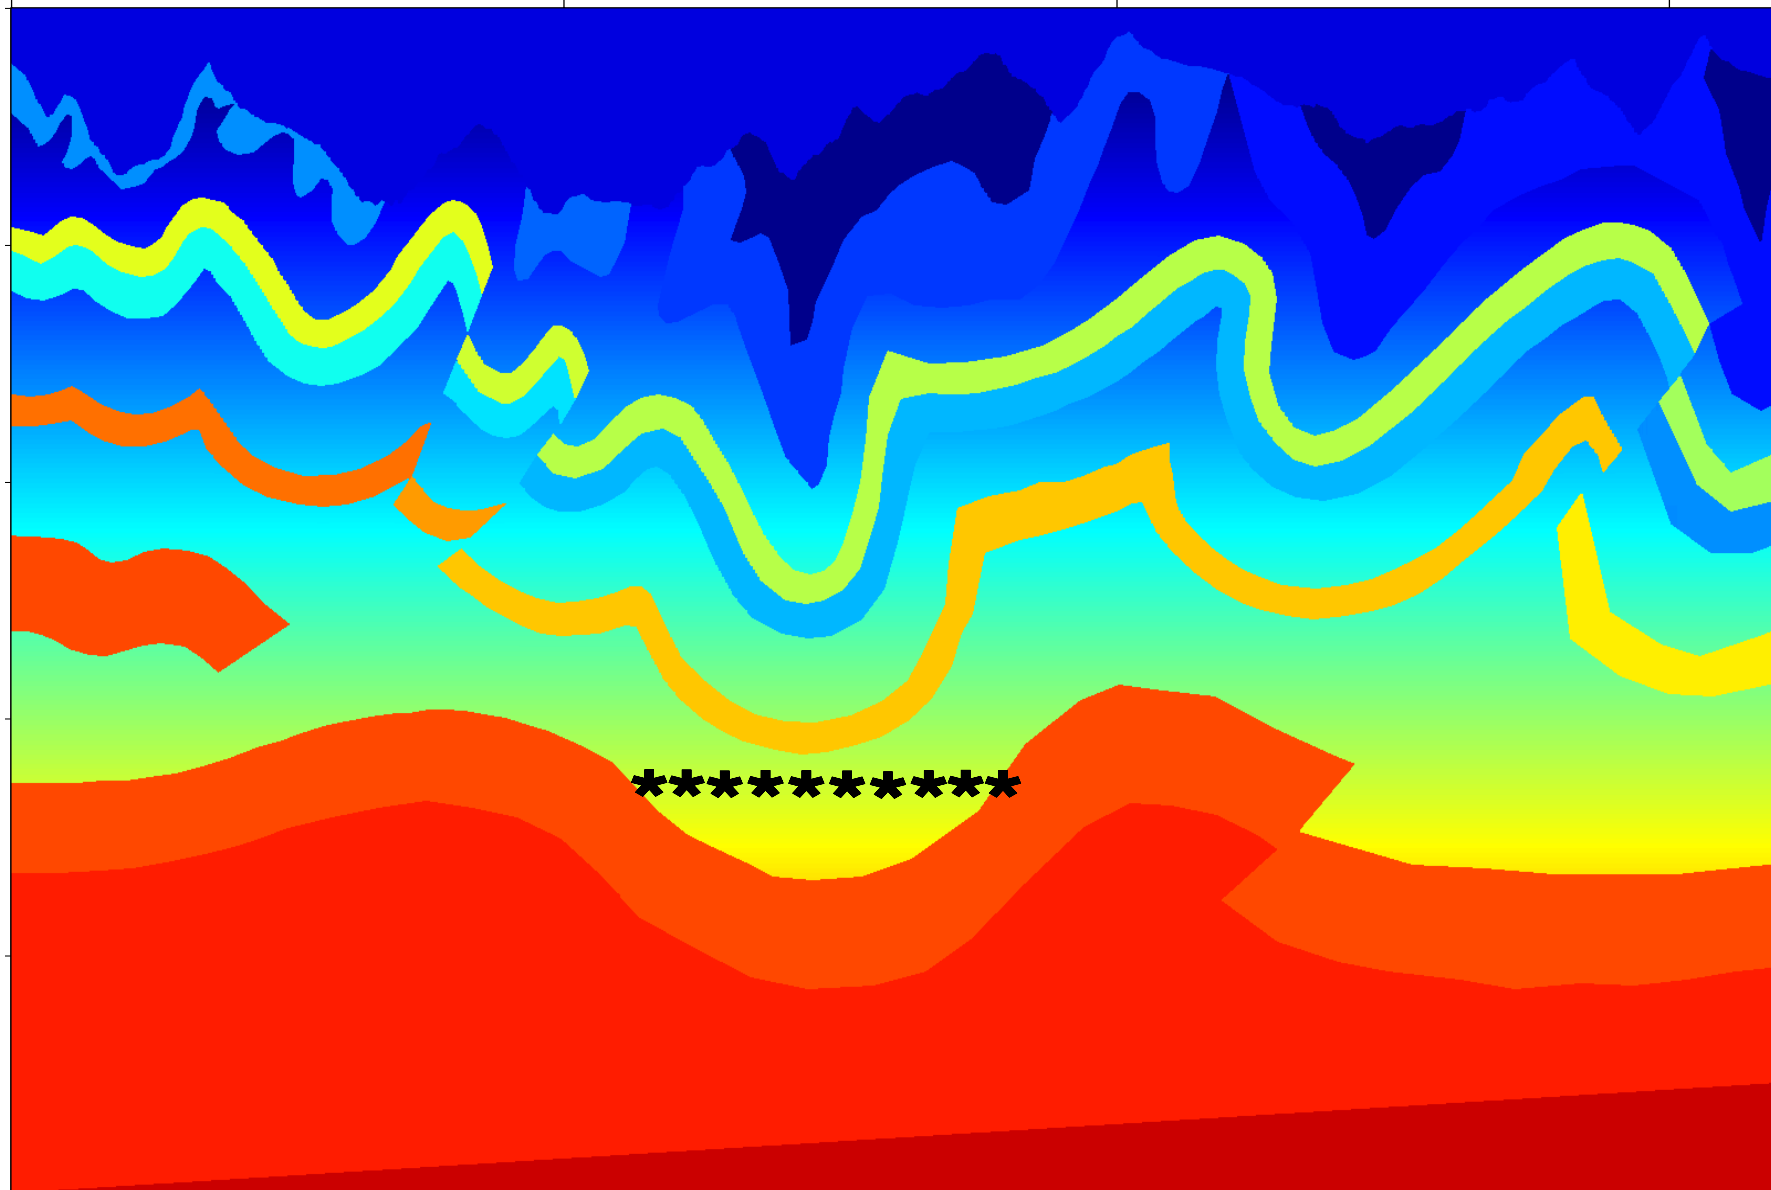

$$\mathbf{m}_{LS} = \underset{\mathbf{m}}{\operatorname{argmin}} \|\mathbf{L}\mathbf{m} - \mathbf{d}\|_2^2 + \mu\|\mathbf{D}\mathbf{m}\|_2^2$$

$D$  is second order derivative operator and  $\mu$  is regularization term.

To minimize the cost function, we use Conjugate gradient with regularization.

# Surface and SWD acquisition on BP model

Surface migration

SWD migration

Surface+SWD migration

Surface migration

SWD migration

Surface+SWD migration

Minimizing depth imaging uncertainties results in better production.

Uncertainties of depth imaging are discussed.

Poor subsurface illumination inherent in seismic imaging is shown to be one of the major sources of uncertainties.

Seismic-While-Drilling imaging combined with surface seismic improved subsurface illumination.

More elegant approach like joint inversion of the SWD and surface seismic data could improve the performance of the proposed approach.

We would like to thank the following sponsors for supporting this research:
